

Description

These mobile solutions will help you create a controlled acoustic environment that allows you to work from home without compromising the quality of your output. The 8 unit mobile wall producer kit was designed to give you complete freedom and countless layout possibilities that can adapt to different setups. With this kit, you can treat first reflection points around the listening position whilst isolating a vocal recording with the other, or use the whole kit for a full all-round treatment if you're in the mixing phase. Being a portable solution, you can move and reconfigure the mobile walls as you please. The panels can also be easily mounted to a wall whenever you need.
